

Community Outreach Green Activities

National Arbor Day Society membership and tree planting on campus.

Students volunteered at the county's recycling center on the Household Hazardous Waste Collection Day, sponsored by TN Department of Environment and Conservation.

Students volunteered for a stream clean-up at the Obed River, which is a National Wild and Scenic River that flows through Crossville.

Environmental Science students gained awareness of environmental issues by taking field trips to local businesses, factories, and the recycling center. By visiting these places, the students have learned how much waste is produced and how they can help prevent or recycle as much as possible in their everyday lives.

Finally, another new project has been to help other schools kick off their recycling programs. Two elementary schools enlisted the help of CCHS Environmental Science students to get them started on recycling paper and plastics. CCHS helped to get them started in the right direction at their school, and plans to continue helping in years to come!
